ROLLERSKATING ROBOT SAVES SPACEMAN!

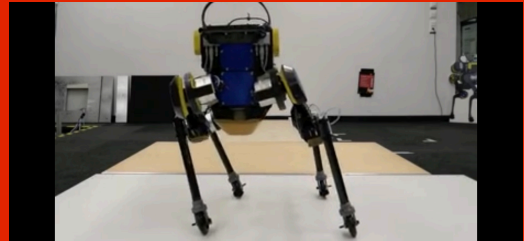

BY GEORGE M

Anymal can rollerskate, he is like a human. He has a first aid kit and he uses his legs to skate and walk on uneven ground. Marko the inventor built Anymal to save your life.

Anymal saved a spaceman on the moon, who had fallen into a crater. Anymal drifted over to the spaceman to rescue him. Anymal used a good and special claw to rescue the spaceman.

The spaceman said to Anymal “thank you very much”.
