

$$3 \quad 0.2 = \frac{2}{10} \xrightarrow{\div 2} = \frac{1}{5}$$

$$0.4 = \frac{4}{10} \xrightarrow{\div 2} = \frac{2}{5}$$

$$0.8 = \frac{8}{10} \xleftarrow{\times 2} = \frac{4}{5}$$

$$4. \quad a) \quad 0.54 = \frac{54}{100} \xrightarrow{\div 2} = \frac{27}{50}$$

$$b) \quad 0.6 = \frac{6}{10} \xrightarrow{\div 2} = \frac{3}{5}$$

$$c) \quad 0.3 = \frac{3}{10} \xrightarrow{\times 10} = \frac{30}{100}$$

6.

$$\frac{37}{10}$$

This is an improper fraction, it is bigger than 1, whereas 0.37 is clearly smaller than 1.

$$\frac{37}{10} = 3 \frac{7}{10}$$

This model shows

$$\frac{37}{10}$$

This shows 0.37
(3 tenths and 7 hundredths
which is my part of a
square).
