

True or false.

- a) $5,463 \times 18$ is the same as $18 \times 5,463$
- b) I can find the answer to $1,100 \times 28$ by using $1,100 \times 30$
- c) $70 \div 10 = 700 \div 100$

$$2,190 \times 14 = 30,660$$

Are there any other 4-digit numbers when multiplied by a 2-digit number less than 20 give the answer 30,660?
