

# Cube Number Extension Task

1) Look at this Carroll diagram:

	Odd	Even
Cube Number	111, 216	512, 16
Not a Cube Number	27, 343, 18	36, 12, 64

a) Ben and Sophia have been asked to sort a group of numbers into the correct places in the Carroll diagram. Circle any numbers which they have put in the wrong place and show where these numbers should be placed.

b) Ben and Sophia must decide whether this statement is true or false.

**Cubes of even numbers are always even and cubes of odd numbers are always odd.**

Explain whether you think the statement is true or false. Then, prove it by adding 5 more cube numbers to the Carroll diagram in the correct places.

2) Is this statement always, sometimes or never true?  
The last digit of a cube number is the same as the last digit of its cube.

## Answers

1) a) *The numbers 111, 216, 16, 27, 343, 18 and 64 should be circled.  
Carroll diagram correctly completed:*

	Odd	Even
Cube Number	343, 27	512, 64, 216
Not a Cube Number	111	36, 12, 16, 18

b) *The statement is true. When you multiply any odd number by another odd number, the result will be odd. When you multiply any number by an even number, the result will be even.*

2) *This is sometimes true. If a number ends in 0, 1, 4, 5 and 6, the last digit of its cube is the same as the original number's. However, if a number does not end in one of these digits, the last digit of its cube is as follows:*

- number ending with 2: the last digit of its cube is 8;*
- number ending with 8: the last digit of its cube is 2;*
- number ending with 3: the last digit of its cube is 7;*
- number ending with 7: the last digit of its cube is 3.*
